**Abstract** 

Polyoxymethylene copolymers, their preparation and use

- 5 Copolymers are described containing blocks of the structural repeat units of the formula I and blocks containing structural units of the formula II
  - $[-O-CH_2-]_x$  (I),  $[-O-R^1-]$  (II),
- where R<sup>1</sup> is a divalent radical derived from a hydroxy-terminated aliphatic or cycloaliphatic oligomer or polymer which, where appropriate, has ether groups and/or carbonyloxy groups in the chain, and x is a whole number, at least 10.
- 15 The copolymers may be used for producing moldings.
